

## Treesect Takes Delivery of First 2012

**SYDNEY, MAY 2008** -- Red Roo Sales & Service Company Pty Ltd has completed delivery and commissioning of the new Model 2012 chipper to Treesect Tree Service.

This marks the first delivery of the 2012 in Australia and according to owner David Smith, the 2012 has “performed above expectation and it is already a favorite with the crew.”

David has been in the industry for a number of years and has owned and operated both disc and drum type chippers. When the decision to update his 3 year old Woodsman was made, David chose to switch back to a disc style chipper.

“We have a program of turning equipment every 2-3 years,” says David. “It allows us to keep the maintenance and operating costs down by having the most modern equipment in the fleet. I liked what I saw in the 2012 - great build quality and excellent performance.”

“Red Roo is pleased to have Treesect as the launch customer for the 2012,” states Sean Kerr of Red Roo. “While the unit is new to Australia, it has been well received in US. Built by JP Carlton, the 2012 has been factory built for Australian conditions.”

The 2012 features a John Deere® 4045 series 4.5l, 140hp (104.kW), 4 cylinder, turbo charged diesel engine with air to air intercooling. This is the same power unit in Dave’s previous chipper and the fuel economy and reliability are rock solid. The engine burns less than 1.9lph at idle and between 7-8lph at full throttle.

Standard features on the 2012 include winch, mounted spare, 360° rotational discharge chute and powerful, class leading 32cu inch twin feed wheel motors.
